

The "Tube model"

Function

This Visual Ice Indicator consists of a little shape in form of tube.

Flying in icing conditions, the shape accumulates ice, which is easily visible by both pilot and co-pilot.

The probe is internally lighted to allow the use in night flight conditions.

This device is generally installed on the windshield central arm in the crew's direct field of vision.

Application

This equipment is installed basic on the Airbus aircraft series A319, A320, A321, A330 and A340.

Main characteristics

Weight :	0.060 Kg / 0.130 lbs.
Power voltage :	28 VDC 20 mA.
Lighted source :	green LED's.
Temperature :	from - 55 °C to + 85 °C.
Altitude :	from - 1000 to + 41000 ft.
Color :	black.
